

### DynaView Software updates high capacity presses

DynaView Software is a solution as a retrofit for high capacity presses. The image below shows a 200.000kgf capacity horizontal press where it was fitted a load cell, a pressure transducer, a linear displacement transducer and DynaView software, replacing an old chart recorder. The software monitors the pressing and halts it in case it is outside the force x displacement curve set by user.

The choice of DynaView software grants customers a flexible and reliable testings environment, giving modern features to machines with force chart recorders. Let us know the testing needs of your production line, we will be glad to propose solutions.
